

FDS-100R Flow Distribution System

The FDS-100R Flow Distribution System is designed to distribute various gas streams to the components of an extractive CEM system. The basic panel accepts 16 calibration gas inputs and a single sample gas input. The panel provides control to 5 analyzers via solenoid valves for internal control. The panel can be controlled remotely using the Strata Data Acquisition System.

The FDS-100R Flow Distribution System can be custom configured to meet your sampling needs. Note that custom configurations are a purchase only option. Designed for long term performance and reliability, AMP-Cherokee CEM components are available for OEM and replacement applications.

- Solenoid Valve Controlled
 - 16 Calibration Gas Inputs
 - Supports 5 Analyzers
 - Manual or Automatic Mode
 - Power: 115 VAC
 - Weight: 10 lbs
- For application information and ordering, please contact a Sales Engineer at **800.399.4236** or via email at sales@ampcherokee.com.

A Name You Can Trust

Since 1995, AMP-Cherokee has been providing high performance, cost effective compliance and process performance monitoring solutions to industry.

Our years of experience and customer satisfaction in a variety of industrial applications is your guarantee for all your CEM systems and service needs.
